JOINT PRESS RELEASE--

CDO TECHNOLOGIES AND EMERSON & CUMING MICROWAVE PRODUCTS ANNOUNCE RFID PARTNERSHIP FOR AFCEA BELVOIR INDUSTRY DAYS EXHIBIT

Randolph, MA – March 19, 2010-- CDO Technologies and Emerson & Cuming Microwave Products are proud to announce their new RFID (Radio Frequency Identification) strategic partnership. This partnership will make its debut at the 8th annual AFCEA Belvoir Industry Days Conference (March 30th- 31st) in National Harbor, Maryland where they will exhibit RFID hardware, software and tagging solutions for the Defense and Military industry.

As one of the largest RFID Integrators in the United States, CDO Technologies has extensive experience in designing and implementing RFID solutions with both government agencies and customers in the private sector. This relationship with Emerson & Cuming Microwave Products, a recognized global leader in engineered RF materials, is fitting as ECMP's MetalTag™ line of UHF and HF RFID metal-mount tags expands into the market. A joint booth presence allows both CDO Technologies and Emerson & Cuming Microwave Products to offer their combined capabilities and expertise to attendees.

"CDO is constantly researching new technologies to help provide our customers with the most advanced technology to meet ever changing business requirements," noted Susan King, Sales Director at CDO. "Our burgeoning relationship with Emerson & Cuming Microwave Products brings a new, advanced set of RFID products into the CDO toolbox to offer solutions to meet today's requirements, and lay a groundwork for future business process improvements users are looking for."

"This partnership is a logical move for both companies," said Devin Sullivan, RFID Manager at Emerson & Cuming Microwave Products. "The AFCEA Belvoir Conference is the beginning of our combined efforts to make the terms RFID and Defense synonymous with CDO Technologies and Emerson & Cuming Microwave Products."

About CDO Technologies

CDO Technologies Inc. (CDO) is a leading solutions provider of the integration of Automatic Identification Technologies (AIT), such as Radio Frequency Identification (RFID), into business processes.

- more -

CDO has been directly involved in the design, development, deployment, and sustainment of AIT solutions since their founding in 1995.

CDO is a proven minority veteran-owned company headquartered in Dayton, Ohio. With over 300 employees, CDO serves an impressive portfolio of customers that include: Air Force AIT Program Management Office, Air Mobility Command, Air Force Institute of Technology, General Electric Aircraft Engines, Air Force Research Laboratory, Dayton Public Schools, Air Force Material Command/Development and Fielding Systems Group, Military Entrance Processing Command, Department of Energy, the Federal Aviation Administration and the Environmental Protection Agency.
